

Toggle Button Dark/Light

We have to add a Dark/Light theme mode button in DIP-O, to homogeneize BazeField product.

Let's list all the possible variations we can use to do that with Material UI, and particularly with DIP-O common wrappers. [↗](#)

Switch [↗](#)

Pros : [↗](#)

- Already in project, not to be created from scratch
- Already have a state mod, active/unactive (OneChange)

Cons : [↗](#)

- Need a lot of style
- Not easy to change the icon

Toggle Button : [↗](#)

Pros : [↗](#)

- Already have a state mod, active/unactive (OneChange)
- Easy to change the icon

Cons : [↗](#)

- it's for a group of item
- Not integrated in the project, need to be create from scratch

Button : [↗](#)

Pros : [↗](#)

- Already in project, not to be create from scratch
- Material UI allow an attribute named "icon"

Cons : [↗](#)

- Don't have a state mod, active/unactive only when you press (OneClick)

Checkbox : [🔗](#)

Pros : [🔗](#)

- Already in project, not to be create from scratch
- Already have a state mod, active/unactive (OneChange)
- Just need to change the background icon when hover
- Easy to change the icon

Exemple : `<Checkbox {...label} icon={<FavoriteBorder />} checkedIcon={<Favorite />} />`

Cons [🔗](#)

- Adapt wrapper

Conclusion [🔗](#)

I choose the checkbox because it's most easier to implement and it's easy to change the icon when it's pressed
